

Natural Language Explanation for Recommendations and Beyond

LI Lei

A thesis submitted in partial fulfilment of the requirements
for the degree of
Doctor of Philosophy

Principal Supervisor:
Prof. SURNAME Name (Hong Kong Baptist University)

May 2022

DECLARATION

I hereby declare that this thesis represents my own work which has been done after registration for the degree of PhD at Hong Kong Baptist University, and has not been previously included in a thesis or dissertation submitted to this or any other institution for a degree, diploma or other qualifications.

I have read the University's current research ethics guidelines, and accept responsibility for the conduct of the procedures in accordance with the University's Research Ethics Committee (REC). I have attempted to identify all the risks related to this research that may arise in conducting this research, obtained the relevant ethical and/or safety approval (where applicable), and acknowledged my obligations and the rights of the participants.

Abstract

Your abstract

Keywords: Explainable Recommendation, Explainable Artificial Intelligence, Recommender Systems

Acknowledgments

I would like to thank Dr. Guozhong Li for the nice suggestion of making this template as well as the procedure open-source.

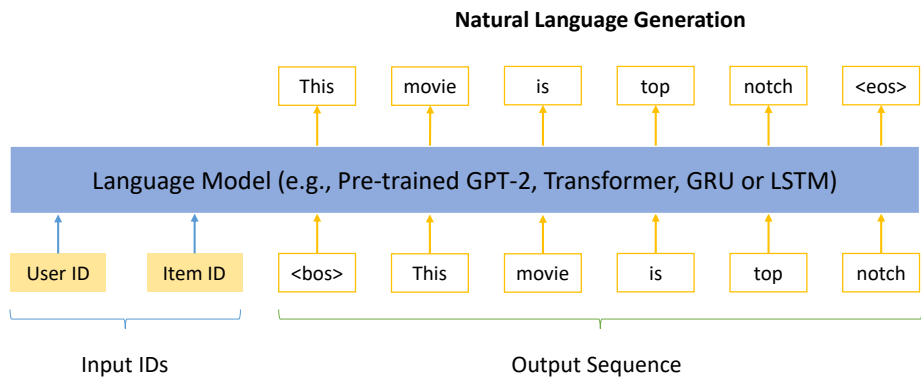

Figure 1.1: Overview of recommender systems-based natural language generation. In the case of recommendation explanation generation, the model is instructed to generate a word sequence for explaining why an item is recommended to the user.

Chapter 2

Literature Survey

2.1 Explainable Recommendation

2.2 Context-aware Recommendation

2.3 Natural Language Generation

2.4 Learning to Rank

Chapter 3

Natural Language Explanation Generation

3.1 Background

3.2 Problem Formulation

3.3 Model Description

3.3.1 Input Representation

3.3.2 Transformer and Attention Masking

3.3.3 Explanation and Recommendation

Explanation Generation:

Context Prediction:

Rating Prediction:

Multi-task Learning:

Algorithm 1 Sentence Grouping via Locality-Sensitive Hashing (LSH)

Input: shingle size n , similarity threshold t , minimum group size g

Output: explanation set \mathcal{E} , groups of sentences \mathcal{M}

```
1: Pre-process textual data to obtain the sentence collection  $\mathcal{S}$ 
2:  $lsh \leftarrow MinHashLSH(t)$ ,  $\mathcal{C} \leftarrow \emptyset$ 
3: for sentence  $s$  in  $\mathcal{S}$  do
4:    $m \leftarrow MinHash()$  // create MinHash for  $s$ 
5:   for  $n$ -shingle  $h$  in  $s$  do
6:      $m.update(h)$  // convert  $s$  into  $m$  by encoding its  $n$ -shingles
7:   end for
8:    $lsh.insert(m)$ ,  $\mathcal{C}.add(m)$  //  $\mathcal{C}$ : set of all sentences' MinHash
9: end for
10:  $\mathcal{M} \leftarrow \emptyset$ ,  $\mathcal{Q} \leftarrow \emptyset$  //  $\mathcal{Q}$ : set of queried sentences
11: for  $m$  in  $\mathcal{C}$  do
12:   if  $m$  not in  $\mathcal{Q}$  then
13:      $\mathcal{G} \leftarrow lsh.query(m)$  //  $\mathcal{G}$ : ID set of duplicate sentences
14:     if  $\mathcal{G}.size > g$  then
15:        $\mathcal{M}.add(\mathcal{G})$  // only keep groups with enough sentences
16:        $\mathcal{E}.add(\mathcal{G}.get())$  // keep one explanation in each group
17:     end if
18:     for  $m'$  in  $\mathcal{G}$  do
19:        $lsh.remove(m')$ ,  $\mathcal{Q}.add(m')$  // for efficiency
20:     end for
21:   end if
22: end for
```

Table 3.1: Statistics of the three datasets.

	Yelp	Amazon	TripAdvisor
#users	27,147	7,506	9,765
#items	20,266	7,360	6,280
#records	1,293,247	441,783	320,023
#features	7,340	5,399	5,069

CURRICULUM VITAE

Academic qualifications of the thesis author, Mr. LI Lei:

- Received the degree of Bachelor of Engineering from Shenzhen University, June 2017.
- Received the degree of Bachelor of Science from Shenzhen University, June 2017.
- Received the degree of Master of XX from XX University, MM YYYY.

May 2022
